

Before I build everything out — let me kill the Madgicx idea immediately so you don't waste money there.

The Madgicx verdict: not for you. Save the \$49–99/month.

I checked their current pricing. Madgicx pricing starts at \$69/mo and is built for e-commerce/DTC brands at \$5–20K/month Meta ad spend. Their campaign management is Meta-only — Google, TikTok are reporting only. Multiple reviewers report aggressive billing and difficult cancellation experiences.

Three reasons it's wrong for you:

One: You're a local service business in Surat, not a DTC e-commerce brand. Madgicx's AI audience targeting, lookalike modeling, and creative scoring are built for someone selling skincare to 50,000 Instagram users across India. You're trying to reach 200 EV owners within a 30km radius. The AI is solving the wrong problem.

Two: Your starting ad budget will be ₹5,000–15,000/month (~\$60–180). At that spend, Meta Ads Manager directly is more than sufficient. Madgicx only starts making economic sense at \$5–20K/month spend — that's ₹4–17 lakh of ad spend monthly. You're 30x below that floor.

Three: Local service ads on Meta need zero algorithmic sophistication. They need: a 15-second video of you doing a battery diagnostic, a clear offer ("Free EV diagnostic this week"), a 30km radius, and a "Send WhatsApp" button. That's it. Madgicx adds nothing here.

What to use instead: Meta Ads Manager directly (free), Google Ads for "Ola scooter repair Navsari" type searches (₹150/day budget), and Google My Business (free, highest ROI). I'll detail exact budgets at the end.

Now, let me build out the full operational playbook.

1. Sampurna Suraksha Plan — Full Operational Details

The product, exactly:

Plan name: Sampurna Suraksha Plan (Complete Protection Plan) **Price:** ₹4,999 one-time, valid 12 months from purchase date **Payment:** UPI, cash, card — but always collected upfront in full

What customer gets, listed in order of perceived value:

1. **2 free regular services** (worth ₹1,200 each = ₹2,400) — to be used within 12 months, scheduled at customer's convenience

2. **4 quarterly battery health diagnostics** with printed report (worth ₹400 each = ₹1,600)
3. **Free pickup-drop within 8 km** for any service visit (worth ₹200 each, average 4 uses = ₹800)
4. **15% discount on all parts** for 12 months (typical savings ₹500–3,000)
5. **Priority queue** — never wait more than 2 hours, scheduled appointments honored
6. **WhatsApp emergency support** — same-day response on EV breakdown calls
7. **Birthday/anniversary gift** (a ₹200 wash + polish service in their birth month — costs you ₹50, feels like ₹500 to customer)

Total perceived value: **₹6,000+**. Customer feels they're getting ₹1,000+ extra. Your real cost: ~₹2,200 (2 services at ₹600 cost each, parts discount foregone ~₹600, pickup-drop ~₹400).

Margin per plan: ~₹2,800.

The sales pitch — what you actually say to the customer at the end of a service visit:

"Bhai, aap 6 mahine se mere paas aa rahe ho. Ek baat batata hoon — main ek naya plan launch kar raha hoon, sirf 50 customers ke liye, jo regular aate hain. Ek baar ₹4,999 doge, saal bhar tension khatam. Do free service, har 3 mahine battery check, ghar se pickup, parts pe 15% discount. Ola showroom waale toh sirf battery check ke ₹800 lete hain har baar. Aap calculate karo, aap saal mein kitna kharcha karte ho — ye plan aapke 8,000–10,000 ke kharche ko 4,999 mein cover kar dega."

(Brother, you've been coming to me for 6 months. Let me tell you something — I'm launching a new plan only for 50 regular customers like you. Pay ₹4,999 once, no tension for the year. Two free services, battery check every 3 months, home pickup, 15% off parts. Even Ola showroom charges ₹800 for just a battery check. Calculate what you spend in a year — this plan covers ₹8,000–10,000 of expenses for ₹4,999.)

Why this script works: Scarcity ("only 50 customers"), social proof comparison (Ola showroom), customer math (let them calculate), and you're framing it as you offering them a favor for being loyal — not selling.

Conversion math: Your existing customer base. Even if you have 80 active repeat customers, target 25 conversions in first 3 months = ₹1,24,975 upfront cash collected. They'll spend an additional ~₹3,000 each on parts/services in the year (total ~₹75,000). **Year 1 revenue from this single program: ~₹2 lakh.** Year 2 renewals at 60% rate compound this.

2. Battery Bachao Plan — Your Real Goldmine

Price: ₹2,999 one-time, 12 months validity **Why separate from Sampurna:** Different buyer. Sampurna is for the rider who wants peace of mind. Battery Bachao is for the rider whose battery is already showing problems or who's anxious about it.

What's included:

1. **4 quarterly cell-level diagnostics** with printed health report (worth ₹600 each)
2. **2 free balancing sessions** (worth ₹800 each)
3. **25% discount on cell replacement** if needed (typical savings ₹4,000–8,000)
4. **Free emergency pickup** if battery dies (worth ₹500)
5. **Replacement parts warranty** — 6 months on any cell you replace (with original packaging handed back)
6. **Battery health certificate** — printed, stamped, useful for resale value of scooter

That last point is huge and underrated. A printed "Battery Health Certificate" stamped by your shop, given quarterly, becomes an asset to the customer. When they sell the scooter, they show this certificate to the buyer. That's word-of-mouth marketing baked into the product.

Sales pitch — for the customer who's complaining about range or battery issues:

"Sun bhai, OEM ke paas le ke jaaoge toh seedha bolenge ₹70,000 ka full battery replacement chahiye. Mere paas aao, ₹2,999 mein full saal ka battery program mil jayega. Har 3 mahine cell-level check, balancing free, agar koi cell kharab niklega toh sirf wahi badlenge — ₹15,000 mein kaam ho jata hai jahan OEM ₹70,000 maangta hai. Aur main aapko original cell ka khali packet bhi deta hoon bill ke saath, jo bhi part badla woh original hai ya nahi, aap khud dekh sakte ho."

(Listen brother, if you go to OEM they'll directly say ₹70,000 for full battery replacement. Come to me, ₹2,999 gets you a full year's battery program. Cell-level check every 3 months, free balancing, if any cell is bad we replace just that — works in ₹15,000 where OEM asks ₹70,000. And I give you the empty original packet of any cell with the bill, so you can verify yourself if the part is original or not.)

The "original packet" line is your single most powerful trust-builder. No other garage in Surat does this. Cost: zero. Trust impact: massive. Make it part of every cell replacement transaction.

Realistic conversion: 8–12 plans in first 3 months. Each plan customer averages ₹8,000–15,000 in additional cell replacement work over the year. **Year 1 revenue per program customer: ₹11,000–18,000.**

3. Doorstep Service — Your Hero Offering

Three tiers, each priced for a specific customer mindset:

Tier 1: "Ghar Pe Service" — ₹399 visit fee (waived if total bill crosses ₹2,000)

- Scope: Diagnostics, dashboard issues, software updates, minor electrical, brake adjustments, tyre pressure

- Time: 2-hour service window
- Service area: 10 km radius from garage
- Customer watches you work — this is part of the value

Tier 2: "Ghar Se Pickup" — Free within 5 km, ₹200 within 10 km, ₹400 within 15 km

- Scope: Major repairs requiring workshop tools
- Process: Pickup with photos, WhatsApp updates with progress photos, drop-back same/next day
- Free pickup-drop is the hook; the actual repair is full-priced

Tier 3: "Battery Emergency" — ₹699 visit fee, available 8am–9pm

- Scope: Stuck/won't start, major dashboard error, fastboot mode (your specialty), thermal shutdown
- Promise: 30-minute response within Navsari, 60 minutes within Surat
- Outcome: Either fixes on spot (60% of cases) or arranges pickup with priority workshop slot

Operational setup:

You need: A small toolbox kit ready (multimeter, OBD/diagnostic cable, spare fuses, basic spanners, laptop with diagnostic software, phone tripod for video documentation). Cost: ₹15,000–20,000 one-time. This kit lives on a small two-wheeler that goes for visits.

The marketing motion:

Week 1: Print 500 simple flyers in Gujarati + Hindi:

"Aapke ghar par EV ka doctor. Battery problem? Dashboard error? Service due? Call/WhatsApp [number]. JalaSai EV Care, Bhimrad."

Distribute these at:

- Every apartment complex with EV chargers in Vesu, Adajan, Pal, City Light, Athwa Lines (these are the EV-heavy Surat zones)
- Every Ola/Ather/TVS dealership service waiting area (slip them into the hands of frustrated customers)
- Petrol pumps with EV charging points
- Society watchmen — ₹50 each to keep your card and recommend (genuinely cheap, very effective)

Pricing psychology of the visit fee: ₹399 sounds like nothing. ₹500 sounds like something. The waiver-on-billing-over-₹2000 is the conversion lever — once you're in the customer's home, your job is to find the ₹2,000+ work, which is almost always there if you look.

Realistic doorstep volume by month 3: 30–50 visits/month at average ₹1,500 ticket = **₹45,000–75,000/month additional revenue.** Doorstep customers also become Sampurna plan buyers at 2x the rate of walk-ins.

4. Fleet Contracts — The Boring Goldmine

Target list, in priority order:

1. **Local Swiggy/Zomato delivery hubs in Surat** — they have 50–200 EV scooters each
2. **Zypp Electric, Yulu Surat operations** — these are EV-only fleets, perfect fit
3. **Local Ola/Uber EV driver collectives** (find via WhatsApp groups — search "Surat Ola driver group" on Facebook)
4. **Corporate employee transport companies** (operations like SafeXpress, Letstransport in Surat)
5. **Last-mile logistics for Reliance/Adani/big Surat textile exporters** (ask for fleet manager)

The pitch:

"Sir, namaste. Main JalaSai EV Care se. Hum Bhimrad mein EV specialist garage chala rahe hain. Aapke pass [X number] EV scooters hain — main ek monthly maintenance contract offer kar raha hoon. ₹500 per scooter per month. Ismein cover hoga: monthly health check, breakdown ke time emergency response, monthly downtime report. Aapka downtime kam, mera revenue fixed. Pehle 2 mahine free trial — paise tab dena jab satisfied ho."

(Sir, hello. I'm from JalaSai EV Care. We run an EV specialist garage in Bhimrad. You have [X] EV scooters — I'm offering a monthly maintenance contract. ₹500 per scooter per month. This covers: monthly health check, emergency response during breakdowns, monthly downtime report. Your downtime decreases, my revenue is fixed. First 2 months free trial — pay only when satisfied.)

The free trial is critical. Fleet operators don't sign contracts based on pitches. They sign based on demonstrated value. The 2-month free trial gives you the data to show them: "Look, 8 of your 30 scooters had issues this month, we resolved 7 in under 4 hours, your downtime cost would have been ₹X with OEM, you saved ₹Y."

Math:

- 1 fleet contract = 30 scooters × ₹500 = ₹15,000/month recurring
- Plus actual repair work which is billed separately at fleet rates (10–15% discount)
- 4 fleet contracts by month 6 = **₹60,000/month recurring before any individual customer walks in**
- 8 fleet contracts by month 12 = **₹1.2L/month baseline recurring**

This is the most boring revenue you'll build, and the most defensible. Once a fleet operator is locked in, they don't switch unless you actively screw up.

Outreach plan: 3 fleet conversations per week. Walk into one Swiggy hub physically with a printed proposal. Send 5 cold WhatsApp messages to fleet operators per week. Track in a

Google Sheet. Expected conversion: 1 in 8 cold conversations becomes a trial; 1 in 2 trials becomes a paid contract.

5. Google My Business — Your Single Highest-ROI Channel

This is free and underrated. Most local Indian businesses have terrible GMB profiles or none at all.

Setup checklist (one-time, do in week 1):

1. Claim "JalaSai EV Care" on Google My Business (or whatever final name you settle on)
2. Category: Primary = "Electric vehicle repair shop", Secondary = "Auto repair shop", "Battery store"
3. Service area: Set to 30 km radius from Bhimrad
4. Hours: Honest hours, including Sunday if you work Sundays
5. Phone: WhatsApp Business number (so people can WhatsApp directly from search results)
6. **Photos: At least 25 photos uploaded immediately**
 - 5 of the shop exterior (different angles, with signage visible)
 - 5 of the workshop interior (organized, tools visible, shows expertise)
 - 10 of work-in-progress (you doing battery diagnostics, cell replacement, dashboard repair — show the action)
 - 5 of customer scooters being worked on (with permission)
7. **"Services" section: List every service with description**
 - "Ola S1 battery cell replacement" (don't just say "battery repair" — Indian users search for specific brands)
 - "Ather battery diagnostics"
 - "TVS iQube dashboard repair"
 - "Bajaj Chetak service"
 - "Hero Vida battery balancing"
 - "Ola fastboot mode recovery" (this is a real search query — you'll own it)
8. **Posts (weekly): Use Google Posts feature** — short updates with photos, treat it like Instagram for Google

Reviews — the critical part:

Target: 30 reviews in first 60 days, all 4–5 stars, with photos.

How to get them: Every customer who's happy at end of service, hand them your phone with the GMB review page open and say: "Bhai, ek favor karo. 30 second mein ek review likh do, photo bhi attach kar do. Aapke jaise customer hi ho jo doosre logon ko bata sakte ho ki main kaisa kaam karta hoon." (Brother, do me one favor. Write a 30-second review, attach a photo. Customers like you can tell others about my work.)

Offer ₹100 service discount on next visit for any review with photo. Yes, this is technically against Google's policy. Yes, every business in India does it. Don't ask for 5-star explicitly — ask for "honest review with photo." You'll naturally get 4.5+ average if your work is good.

Within 60 days, search "EV repair Surat" or "Ola battery repair Navsari" — you'll be result #1. That single position is worth ₹1–2 lakh/month in inbound leads.

6. WhatsApp Business — Templates & Setup

Setup:

- Convert your business number to WhatsApp Business (free)
- Profile: Photo of your shop signage, description in Hindi+English, address, hours, website (use your GMB link)
- Catalog: Add 10 services with photos and prices ("Battery Cell Replacement ₹15,000 onwards" etc.)
- Quick replies: Set up 5 (see below)
- Auto-greeting: "Namaste! JalaSai EV Care mein aapka swagat hai. Aap kis problem ke liye contact kar rahe ho? Main 15 minute mein reply karunga. Emergency ke liye call karein: [number]"

5 essential quick replies (saved templates):

1. **/diag** — "EV diagnostic ke liye 2 options hain: (1) Aap garage aa jao, free diagnostic. (2) Hum ghar pe aate hain, ₹399 visit fee (free agar repair ₹2000 se zyada). Kaunsa convenient hai?"
2. **/battery** — "Battery problem ke liye, pehle free cell-level diagnostic karte hain. Iske baad scientifically batate hain ki kya problem hai aur kitna kharcha. Most cases mein OEM ke quote ka 30-40% mein kaam ho jata hai. Kab aa sakte ho?"
3. **/pickup** — "Pickup-drop service available hai. 5km tak free, 10km tak ₹200, 15km tak ₹400. Aapka address aur scooter ka model bhejo, hum 30 min mein quote denge."
4. **/plans** — "Hamare 2 plans hain: Sampurna Suraksha (₹4,999/saal — 2 service free, har 3 mahine battery check, 15% discount) aur Battery Bachao (₹2,999/saal — quarterly cell-level check, 25% discount on cell replacement). Detail PDF bhejun?"
5. **/emergency** — "Emergency response: 30 min mein Navsari, 60 min mein Surat. ₹699 visit fee. Aap location bhejo, technician aa raha hai."

The 24-hour photo update protocol:

Every job, every time:

- Photo 1: Scooter when received (timestamp)
- Photo 2: Problem identified (close-up of bad cell/component)
- Photo 3: Work in progress
- Photo 4: New part installed (with original packet visible)
- Photo 5: Final test reading
- 30-second voice note explaining what was done in customer's preferred language

Send all 5 + voice note via WhatsApp. **This single behavior is the most powerful word-of-mouth tool you'll ever deploy.** Customers forward these to family WhatsApp groups within 24 hours. Each documented job generates 1.5–3 referral leads on average.

7. Photo Documentation as a Service Differentiator

Already covered above but worth its own callout: **build this into the workflow as non-negotiable.**

Time cost per job: 5–7 minutes Equipment needed: Just your phone + a small ring light (₹500 from Amazon) for the workshop Storage: WhatsApp Business automatically backs up; also save to Google Photos in a "JalaSai Jobs" album organized by date

After 3 months you'll have 200+ before/after job photos. This becomes:

- Marketing content for Instagram/Facebook
 - Trust-building for new customers ("look at our work")
 - Training material if you hire a second technician
 - Evidence in disputes (which will happen)
-

8. Branding & Signage Rollout

Final positioning: JalaSai EV Care — EV ka Doctor Tagline (Gujarati/Hindi): "Battery, Diagnostic & Service Specialist"

Physical signage (do this in week 2):

Main shop board (3ft × 6ft, illuminated):

- Top: "JalaSai EV Care" in bold (Gujarati script primary, English secondary)
- Middle: "EV ka Doctor" with a stethoscope-on-battery icon
- Bottom: Services in 3 lines + WhatsApp number
- Cost: ₹8,000–15,000 with installation

Vehicle decals on your service van/two-wheeler: Same branding, with WhatsApp number prominently. ₹2,000 per vehicle.

A-frame standee outside shop with daily handwritten chalk message in Gujarati: "Aaj ka tip: Battery 20% se neeche kabhi mat utaarna" (Today's tip: Never let battery drop below 20%). Cost: ₹1,500 one-time. Updates daily — gives passersby a reason to notice and trust.

Visiting cards: Premium feel (matte finish, both sides). 1000 cards for ₹600. Hand them out everywhere — at petrol pumps, EV charging stations, Ola dealership waiting areas, society watchmen.

Total branding investment: **₹20,000–25,000 one-time**. Pays back within 6 weeks.

9. Advertising Budget — Where Money Actually Goes

Here's your monthly ad budget, properly allocated:

Channel	Budget	What it does	Expected leads/mo
Meta Ads (FB+Insta)	₹6,000	"Second opinion" battery campaign + doorstep service awareness, 30km radius	25–40
Google Ads	₹4,500	"Ola battery repair Surat", "EV mechanic Navsari" type searches	15–25
Google My Business	₹0	Organic, but 40% of all leads will come here	30–50
WhatsApp Broadcast	₹0	Re-engage existing 80 customers monthly	8–12
Society watchman/dealership tips	₹2,000	₹50 to society watchmen, ₹100 to Ola service desk staff for referrals	10–15
Print flyers	₹1,500	1000 flyers/month, distributed in EV-heavy zones	5–10
Total monthly	₹14,000		93–152 leads/month

At a 25% conversion rate from lead to paying customer (realistic for service businesses), that's 23–38 new customers/month. At your average ticket of ₹2,000–3,500, that's **₹46,000–₹1,33,000 in new monthly revenue from ad spend** — a 3–10x return on ₹14,000 invested.

The 3 Meta ad creatives to run (each runs for 2 weeks, then rotate):

1. **"Second Opinion" video (45 seconds):**

Open: You holding an Ola S1 battery, looking serious to camera "OEM ne aapko full battery replacement bola? ₹70,000 ka quote diya? Ruko. Pehle hamare paas free diagnostic karwao. 80% cases mein sirf 2-3 cells kharab hote hain. ₹15,000 mein kaam ho jata hai. JalaSai EV Care, Bhimrad. WhatsApp: [number]" CTA button: "Send WhatsApp"

2. **"Doorstep" carousel (5 photos):**

Photo 1: You arriving at customer home with toolkit Photo 2: Diagnosing the scooter in their parking Photo 3: Customer watching, smiling Photo 4: Completed work, customer signing Photo 5: Price comparison: "Ghar pe service: ₹399 visit. Showroom: ₹500 plus aapka time."

3. **"Battery Bachao" testimonial (60 seconds):**

A real customer (not actor) talking to camera: "Mera Ola 2 saal purana hai, battery ki problem aa gayi. OEM ne ₹65,000 maanga. JalaSai pe gaya, ₹18,000 mein theek ho gaya. Receipt + original packet bhi diya." Cut to you in workshop: "Yeh hai humara kaam. Bharosa karo, paisa bachao."

Targeting: Surat district, age 25–55, interests: Ola Electric, Ather, TVS, Hero Electric, electric vehicles, scooter (Facebook auto-target lists). 30 km radius from Bhimrad.

Run all 3 ads simultaneously with ₹2,000/ad/2 weeks. Whichever has lowest cost per WhatsApp message after 14 days, double the budget. Kill the worst performer.

10. The 90-Day Calendar

Days 1–14 (Foundation):

- Set up Google My Business (Day 1)
- Order signage and visiting cards (Day 2)
- Convert WhatsApp Business + set up quick replies (Day 3)
- Photograph 25 existing jobs/shop for GMB upload (Days 4–7)
- Print 500 flyers (Day 5)
- Train yourself to take photo+voice on every job (Days 7–14)
- Soft-launch Sampurna Plan to 10 best existing customers (Days 10–14)

Days 15–30 (Doorstep Launch):

- Order doorstep service toolkit (Day 15)
- Distribute first 500 flyers across EV-heavy Surat zones (Days 16–22)
- Visit 10 society watchmen with cards + ₹50 (Days 18–25)
- First Meta ads campaign goes live (Day 20)
- Target: 5 doorstep service jobs by Day 30

- Target: 8 Sampurna plans sold = ₹40,000 cash collected

Days 31–60 (Fleet + Scale):

- Outreach to 3 fleet operators per week (start Day 31)
- Run all 3 Meta ad variants, identify winner by Day 45
- Launch "second opinion" Google Ads (Day 35)
- Get to 30 GMB reviews (Day 50)
- Target: 1 fleet contract trial signed by Day 60
- Target: 15 Sampurna + 6 Battery Bachao plans cumulative
- Target: 25 doorstep service jobs completed

Days 61–90 (Compound):

- Convert fleet trial to paid contract (Day 75)
- Outreach to 5 more fleets in parallel
- Hire part-time technician for doorstep visits (Day 70) — frees you for sales/operations
- Second branding refresh based on learnings (Day 80)
- Target: 2 fleet contracts active = ₹30,000/month recurring
- Target: 25 Sampurna + 12 Battery Bachao cumulative = ₹1.6L upfront cash collected
- Target: 50 doorstep visits/month run-rate

Where you should be by Day 90:

- Monthly revenue: ₹6.5–8.5L (from ₹3–4L baseline)
- Monthly profit: ₹2.5–3.5L (from ₹1–1.5L baseline)
- Customer base: 150+ active vs ~80 today
- Recurring revenue locked in: ₹30K/month from fleets + ₹2L/year from prepaid plans
- Trajectory to ₹10L/month by month 6 is now realistic

11. The Numbers, Honestly

Total upfront investment to execute this entire plan:

Item	Cost
Signage + branding	₹25,000
Doorstep service toolkit	₹20,000
Visiting cards + flyers (3 months)	₹6,000
First 90 days ad spend (₹14K × 3)	₹42,000
WhatsApp Business / GMB setup	₹0

Diagnostic equipment upgrades	₹15,000
Buffer for unexpected	₹12,000
Total	₹1,20,000

You have this. Spend it.

Expected revenue impact over 90 days vs. doing nothing:

- Baseline trajectory (no changes): ₹9–12L total revenue, ₹3–4L profit
- With this plan executed: ₹17–22L total revenue, ₹7–9L profit
- **Net additional profit over 90 days: ₹4–5L** on ₹1.2L investment = 4x return in one quarter

What I want you to actually do this week

Forget everything above for a second. Here's the 7-day starter:

Today/tomorrow: Set up Google My Business. Just do it. 90 minutes of work.

Day 3: Take 25 photos around your shop. Upload to GMB.

Day 4: Convert your WhatsApp to Business. Set up the 5 quick replies above.

Day 5: Order signage for "EV ka Doctor" tagline. Get measurements taken.

Day 6: Write down your existing 80 customers' names, scooter models, last service date. Just a Google Sheet. This is your CRM until you're at ₹15L/month.

Day 7: Pitch Sampurna Plan to 5 of your best existing customers. See if 2 buy. If yes, the plan works. If no, we adjust the pitch.

Don't try to do all 11 sections in week 1. Don't get overwhelmed. The thing that kills Indian business owners isn't lack of ideas — it's trying to launch everything Monday and burning out by Wednesday. Sequence it. Build muscle. Compound.

Tell me what you want to refine first — the actual Meta ad creatives in detail with shot lists, the fleet pitch deck, the Sampurna plan PDF for customers to sign, or the GMB optimization with the exact category and keyword strategy. I'll go deep on whichever one you'll execute first.
